INTENDED USE

The X-TENUator™ system is a re-directive, non-gating crash cushion that is ideally suited for hazards such as the ends of rigid barriers and other roadside hazards. The system is designed to safely decelerate or redirect an errant vehicle.

The X-TENUator™ system is designed to protect narrow roadside hazards and can be installed on concrete or asphalt foundations. Standard non-proprietary w-beam transitions may enable protecting wide hazards. The system is available as a **Test Level 3 device**. Contact the manufacturer for further information and installation instructions.

APPROVALS

The X-TENUator™ system has been fully tested in conformance with NCHRP Report 350 Test Level 3 and is approved by FHWA 

FHWA **Acceptance** Letters: CC-109, November 3, 2010
