

Drawing/specification

Post by Administrator on 8/3/05 at 11:22

A drawing/spec file is at <http://users.wpi.edu/~skwirl/HardwareGuide/New/Ready/Systems/SGM23.pdf>

It would be nice to see more detail on this device. The single image provides little clue to its operation.

Line widths are much darker and fonts are different.

Question - Are the line widths specified on the template minimums ? Or are they "definite" - with no variation allowed?

If they are minimums - then I guess it's ok these borders are much thicker. However, if the intent is to have consistency on details, I would recommend revising this detail to have lighter borders and also slightly reduced fonts to match the rest of the book.

A cross-sectional detail would be beneficial, as well as maybe a photo of the system when it is opened to provide some visual reference of functionality.
